Bangalore, India | Website

Consultant & Lead Full Stack Engineer with over 5 years of experience architecting and delivering high-performance web applications and enterprise-grade Generative AI platforms. Proven track record leading end-to-end product lifecycles—from concept to rapid MVP deployment within 3-month timelines—across Fortune 500 environments including Deloitte USI, Tiger Analytics, and Accenture. Specialized in modern JavaScript/TypeScript ecosystems (**React, Node.js, Next.js**), real-time architectures (**WebSockets**), and cloud infrastructure (**AWS, Azure Solutions Architect certified**). Experienced in leading engineering teams, managing stakeholder communications, and bridging complex business requirements with scalable, secure technical solutions.

SKILLS

Javascript | ReactJS | NodeJS | Websockets | NextJS | HTML | CSS, SCSS | PostgreSQL | Jest JS | DB Fit |
Agile and Scrum Methodologies | AWS S3, Lambda, Stepfunctions, SNS, SES, SQS, | REST API Development |
GIT Version Control, Responsive Web Design | Backend | Frontend | Cloud | Python

PROJECTS

EPIC Hub, Deloitte USI

Jun 2026 – Present

Tech Stack: React, Redux Toolkit, Node.js (Express), PostgreSQL, AWS, REST APIs, WebSockets

- **Led a 3-engineer cross-functional development team**, steering the full plan-design-delivery lifecycle as a techno-functional lead and ensuring 100% on-time milestone delivery within a rapid 3-month product timeline.
- **Architected full-stack enterprise features**, including a custom AI-driven conversational agent, real-time dashboard data refresh pipelines, and multi-channel notification systems (Email & Push).
- **Engineered a comprehensive Role-Based Access Control (RBAC) admin engine**, defining granular persona-based permissions to safeguard sensitive enterprise data and streamline administrative workflows.
- **Interfaced directly with key client stakeholders** to translate complex domain specifications into high-performing frontend UI components and scalable backend service architectures.

Supply Explorer, Deloitte USI

Oct 2025 – Jun 2026

Tech Stack: React, Redux Toolkit, Node.js (Express), GraphDB, PostgreSQL, React Flow, Google Maps SDK, WebSockets, AWS

- **Engineered an interactive supply-chain mapping platform** for a global automotive client, integrating Google Maps SDK to visualize distributed manufacturing facilities, logistics hubs, and dealership networks.
- **Built an interactive node-based canvas UI** leveraging React Flow, enabling users to create, modify, and dynamically manipulate complex workflow graphs via conversational prompts.
- **Integrated real-time chat infrastructure** using WebSockets, facilitating continuous low-latency communication with custom GenAI agents directly inside the visualization workspace.
- **Refactored core state management** from Context API to Redux Toolkit using GitHub Copilot, improving application responsiveness, predictability, and large-scale rendering performance.

SenseAI- Deepthought, Tiger Analytics

Feb 2025 – present

Tech Stack: React 18, Node.js, Express.js, PostgreSQL, Sequelize, WebSockets, Keycloak, Azure App Services, Python

- **Spearheaded end-to-end engineering of DeepThought**, a proprietary enterprise B2B AI platform designed from scratch to operationalize LLM-driven chat workflows across diverse enterprise data sources.
- **Delivered two production-grade MVPs within 3 months**, accelerating enterprise client onboarding cycles and providing rapid demonstration environments for executive stakeholders.
- **Developed real-time conversational streaming and bidirectional sync** via WebSockets, powering sub-second responses and dynamic prompt execution across distributed microservices.
- **Built a secure file-interaction pipeline**, enabling multi-format document uploads, in-browser previews, inline annotations, and direct context injection into LLM prompt contexts.
- **Integrated third-party BI engines** to surface unified, interactive executive dashboards within single-pane-of-glass user interfaces.
- **Implemented enterprise identity management and access control** using Keycloak, ensuring full data isolation, compliance standards, and seamless integration with external Python analytics microservices.

Talent Modeling and Forecasting Web Application, Accenture

May 2021 – Feb 2025

Tech Stack: Vue.js, Node.js, Express.js, AWS (Lambda, Step Functions, S3, SNS, SES, SQS, EC2, CodePipeline), PostgreSQL, SQL, Jest, DBFit

- **Architected predictive workforce modeling and skip-level forecasting modules**, cutting manual operational planning effort by 25% while increasing model forecast accuracy by 15%.
- **Optimized backend query execution and S3 data pipelines**, slashing API latency by 50% to achieve consistent sub-10-second retrievals over large enterprise datasets for 1,000+ daily active users.
- **Developed a custom AWS Lambda packaging plugin**, reducing serverless deployment artifact sizes by 50% and cutting deployment duration by 40%.
- **Automated CI/CD and deployment workflows** via AWS Step Functions and CodePipeline, eliminating 80% of repetitive operational tasks and increasing release frequency by 25%.
- **Instituted rigorous quality standards**, writing automated test suites with Jest and DBFit, addressing 150+ critical edge-case bugs, and boosting overall platform reliability by 40%.

Leadership Data Automation API, Accenture

Jun 2022 – Jun 2024

- **Tech Stack: Node.js, AWS (Lambda, Step Functions, SNS), XML, REST APIs, Postman**
- **Engineered secure, high-throughput microservices and APIs** to ingest, process, and distribute confidential leadership telemetry across 500+ daily mission-critical transactions.
- **Refactored bottlenecked data aggregation routines**, reducing API response times from over 30 seconds to under 10 seconds across extensive relational and hierarchical datasets.
- **Automated complex multi-tier validation and transformation pipelines** using AWS Step Functions and Lambda, reducing manual data-cleansing effort by 70%.
- **Integrated real-time asynchronous alerting** using Amazon SNS, notifying 120+ cross-functional stakeholders of pipeline health, execution statuses, and deployment events.

PROFESSIONAL EXPERIENCE

Consultant- Full Stack Engineer, Deloitte USI	Sep 2025 – Present Bengaluru, India
- Lead a 3-engineer cross-functional team through the complete plan-design-delivery lifecycle, successfully deploying 6+ enterprise web applications across automotive, healthcare, and life sciences domains within a single year. - Serve as the primary techno-functional bridge, leading executive architectural discussions, scoping technical requirements, and enforcing engineering standards to ensure high-availability cloud deployments.	
Lead- App Engineering, Tiger Analytics	Feb 2025 – Sep 2025 Bangalore, India
- Directed the end-to-end architecture and technical development of two enterprise B2B Generative AI platforms, integrating proprietary enterprise data with real-time LLM-driven workflows and embedded BI analytics. - Accelerated time-to-market by launching two production-ready MVPs within 3 months, facilitating executive client demonstrations, rapid feedback cycles, and active enterprise onboarding.	
Full Stack Developer, Accenture	May 2021 – Feb 2025 Bangalore, India
- Built and maintained core enterprise analytics platforms using Vue.js, Node.js, Express.js, and AWS, optimizing backend queries to reduce API latency by 50% for 1,000+ daily active users. - Resolved 150+ critical defects to improve system stability by 40%, and automated serverless CI/CD pipelines via AWS Lambda and Step Functions to eliminate 80% of manual deployment overhead.	

EDUCATION

Bachelors of Technology, Kalinga Institute of Industrial Technology	2017 – 2021 Bhubaneswar, India
Computer Science and Systems Engineering C.G.P.A: 8.55	

CERTIFICATES

AZ-305 - Azure Solutions Architect | AZ-104: Microsoft Azure Administrator Associate | AZ-900: Microsoft Azure Fundamentals | PL-900: Microsoft Power Platform Fundamentals
